BWV 1007

PRÉLUDE

1 3 5 7 9 11 13 15 17 19

Henle no. 666, ©2000:

Prélude BWV 1007

The musical score is written in bass clef with a key signature of one sharp (F#) and a common time signature (C). It consists of 19 measures. The notation includes various musical symbols such as notes, rests, slurs, and fingering numbers (0, 1, 2, 3). The piece is a short, simple prelude, often used as an introduction to the Notebook for Anna Bach.

1.2 Incisione in dettaglio

L'arte della tipografia musicale è chiamata *incisione (su lastra)*, un termine che deriva dalla pratica della stampa musicale a mano.¹ Solo pochi decenni fa, gli spartiti erano realizzati incidendo e punzonando la musica in modo speculare su una lastra di zinco o peltro. La lastra, poi, veniva inchiostrata e le depressioni prodotte da incisioni e punzonature trattenevano l'inchiostro. Imprimendo la carta sulla lastra, si produceva l'immagine della pagina. Punzonature e incisioni erano realizzate completamente a mano e correggere un errore era piuttosto laborioso, perciò l'incisione doveva essere praticamente perfetta al primo colpo. Saper incidere le lastre era una competenza che richiedeva un alto grado di specializzazione; un artigiano doveva sostenere quasi cinque anni di formazione prima di acquisire il titolo di maestro incisore, e per diventare veramente abile servivano altri cinque anni di esperienza.

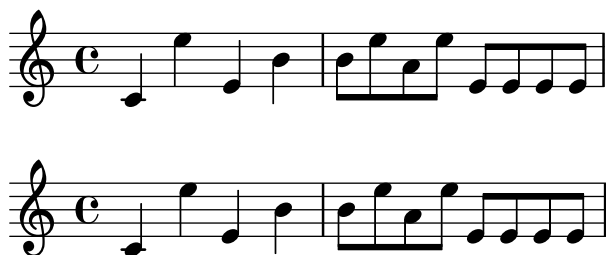

LilyPond si ispira alle incisioni manuali tradizionali pubblicate per tutta la prima metà del XX secolo dalle principali case editrici musicali europee, tra cui Bärenreiter, Duhem, Durand, Hofmeister, Peters e Schott. Quei nomi e quel periodo storico sono talvolta considerati il culmine della pratica dell'incisione musicale artigianale. Avendo studiato queste edizioni, abbiamo imparato molto su come stanno le cose in uno spartito ben inciso e ne abbiamo individuato gli elementi da imitare con LilyPond.

Font musicali

Le immagini qui sotto mostrano alcune differenze tra un'incisione tradizionale e un tipico spartito prodotto dal computer. L'immagine a sinistra riproduce un bemolle preso da un'edizione Bärenreiter incisa a mano; quella a destra raffigura lo stesso segno ma preso da un'edizione della stessa musica pubblicata nel 2000. Nonostante che le due immagini siano stampate con la stessa tonalità d'inchiostro, la versione Bärenreiter sembra più scura: le linee del rigo sono più grosse e il bemolle appare audacemente arrotondato, quasi voluttuoso. Nell'immagine a destra, invece, le linee sono più sottili e il segno è piuttosto diritto e con spigoli vivi.

¹ I primi stampatori europei esplorarono diversi procedimenti, tra cui blocchi di legno intagliati a mano, caratteri mobili e sottili lastre metalliche incise. La tipocomposizione presentava il vantaggio di poter essere corretta più facilmente e di semplificare l'inserimento di testo e parole, ma solo l'incisione permetteva di impaginare la musica senza ostacoli e di inserire notazioni impreviste. Alla fine, gli spartiti incisi a mano divennero lo standard per tutta la musica stampata, con l'eccezione di alcuni inni e canzonieri per i quali la tipocomposizione era giustificata per il fatto di essere più semplice ed economica, anche nel XX secolo.

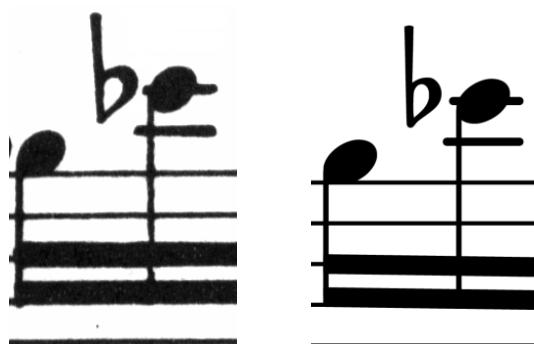

Ciascuna misura contiene unicamente note da suonare in un ritmo costante, e gli spazi interposti dovrebbero riflettere questa situazione. Purtroppo, però, l'occhio ci inganna un po': non solo esso rileva la distanza tra le teste delle note, ma tiene conto anche di quella tra gambi consecutivi. Di conseguenza, le note di una combinazione gambo in su/gambo in giù dovrebbero essere più distanti tra loro e quelle di una combinazione gambo in giù/gambo in su più vicine, il tutto a seconda di come si combinano le posizioni verticali delle note. Le due misure inferiori sono stampate con questa correzione; quelle superiori, tuttavia, contengono ammassi di note gambo in giù/gambo in su. Un maestro incisore avrebbe aggiustato la spaziatura come richiesto per compiacere l'occhio.

Gli algoritmi di spaziatura di LilyPond prendono in considerazione anche le stanghette. Perciò, l'ultimo gambo in su nell'esempio correttamente spaziato è stato allontanato ulteriormente dalla stanghetta finale per evitare troppe linee verticali vicine nella parte finale della misura. Un gambo in giù, invece, non avrebbe richiesto quest'accortezza.

Tagli aggiuntivi

I tagli aggiuntivi presentano una sfida tipografica: rendono più difficile inserire il corretto spazio tra simboli musicali vicini e debbono essere abbastanza nitidi da permettere di identificare l'altezza della nota a colpo d'occhio. Nell'esempio qui sotto, vediamo come i tagli aggiuntivi dovrebbero essere più spessi di una normale linea del rigo e che un incisore esperto li accorcerà per permettere di avvicinare le alterazioni alla testa della nota. Nell'incisione con LilyPond abbiamo incluso anche questa funzionalità.

Dimensionamento ottico

Potrebbe essere necessario stampare la musica in una varietà di formati diversi. All'inizio, questo si poteva ottenere creando punzoni in ciascuno dei corpi richiesti, il che significa che ogni punzone era disegnato per dare il meglio di sé in quel particolare corpo. Con l'avvento dei font digitali, invece, una singola struttura può essere rimpicciolita o ingrandita in scala a piacimento, il che è molto comodo, ma nei corpi più piccoli i caratteri appariranno molto 'leggeri'.

In LilyPond, abbiamo creato font in una serie di pesi corrispondenti a una gamma di corpi per la musica. La prossima è un'incisione di LilyPond in corpo 26:

e questa è la stessa incisione in corpo 11, poi ingrandita del 236% per riportarla alle stesse dimensioni dell'esempio precedente:

Nei corpi piccoli, LilyPond usa linee proporzionalmente più grosse in modo che la musica sia ancora ben leggibile.

Ciò permette anche che righi in corpi diversi coesistano pacificamente se usati insieme sulla stessa pagina:

Perché lavorare così duramente?

Di solito, i musicisti sono presi più dall'eseguire la musica che dall'esaminarla così come appare sulla pagina, perciò i dettagli tipografici troppo cavillosi rischiano di passare per accademia. Ma non è così. Gli spartiti sono materiale da utilizzare praticamente: ogni cosa viene fatta per aiutare il musicista a migliorare il proprio rendimento, e tutto ciò che si rivela poco chiaro o poco piacevole da leggere diventa un ostacolo.

La musica incisa nel modo tradizionale impiega simboli neri su un rigo 'pesante' per creare un aspetto forte, ben bilanciato, chiaramente distinguibile quando è molto distante da chi deve leggerla: se messa su un leggio, per esempio. Un'attenta distribuzione degli spazi bianchi permette di disporre le note in modo molto serrato senza però affollare i simboli sul rigo. Il risultato riduce al minimo il numero delle voltate, con grande vantaggio per l'esecutore.

Questa è una caratteristica tipica della tipografia. L'aspetto della pagina dovrebbe essere bello, e non di per sé, ma soprattutto perché aiuta il lettore nel proprio compito. Per la musica stampata ciò è doppiamente importante, perché i musicisti reggono un carico di attenzione limitato: meno ne debbono impiegare per leggere la musica, più ne possono concentrare nell'eseguirlo. In altre parole: migliore è la tipografia, migliori saranno le esecuzioni.

Questi esempi dimostrano che la tipografia musicale è un'arte raffinata e complessa, la cui messa in pratica richiede notevoli competenze di solito non possedute dai musicisti. LilyPond

costituisce il nostro sforzo per importare l'eccellenza grafica della musica incisa a mano nell'era informatica e renderla disponibile a qualunque musicista. Abbiamo sintonizzato i nostri algoritmi, i disegni dei font e le impostazioni del programma per produrre stampe corrispondenti alla qualità delle vecchie edizioni che amiamo osservare e suonare.

1.3 Incisione automatizzata

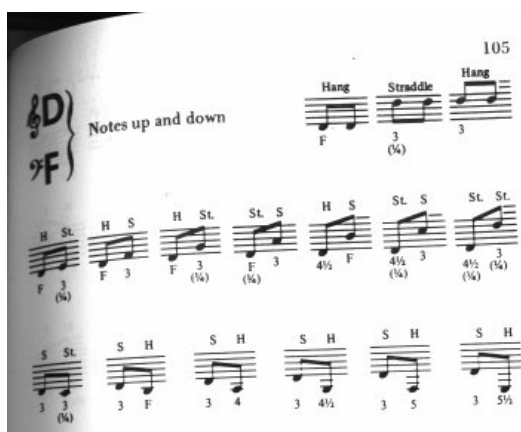

Qui descriviamo ciò che serve per creare un software in grado di simulare l'aspetto degli spartiti incisi: un metodo di descrizione della buona formattazione al computer e numerosi confronti dettagliati con incisioni effettivamente esistenti.

Concorsi di bellezza

In che modo noi decidiamo veramente sulla formattazione? In altre parole: quale delle tre configurazioni seguenti dovremmo scegliere per avere la legatura migliore?

Esistono pochi libri sull'arte di incidere la musica, i quali, purtroppo, si limitano a fornire alcune semplici regole generali e qualche esempio. Da esse si può imparare qualcosa, ma sempre troppo poco per mettere a punto un algoritmo implementabile senza troppa fatica in un computer: seguendole, le eccezioni da codificare a mano sarebbero ancora troppe. Analizzare tutti questi casi è un lavoro enorme, e spesso nemmeno tutti vengono contemplati:

(Fonte: Ted Ross, *The Art of Music Engraving*)

Anziché cercare di scrivere regole di formattazione dettagliate per ogni situazione possibile, dobbiamo solo descrivere gli obiettivi in modo sufficientemente completo da permettere a LilyPond di giudicare da solo l'attrattiva delle diverse possibilità. Poi, per ogni configurazione calcoliamo un punteggio di bruttezza e scegliamo quella meno brutta.

Per esempio, qui sotto mostriamo tre possibilità per una legatura, a ciascuna delle quali LilyPond ha assegnato un punteggio in 'punti di bruttezza'. Il primo esempio ottiene 15,39 punti perché la legatura attraversa una delle teste delle note:

Il secondo è più bello, ma la legatura non comincia o finisce sulle teste delle note. Ottiene 1,71 punti a sinistra e 9,37 punti a destra, più altri 2 punti a causa del fatto che la legatura ascende mentre la melodia discende, per un totale di 13,08 punti di bruttezza:

La legatura finale ottiene 10,04 punti per il vuoto a destra e 2 punti per la pendenza verso l'alto, ma è la più attraente delle tre configurazioni, e così LilyPond sceglie questa:

Questa tecnica è del tutto generale e viene adoperata per prendere decisioni ottimali in merito alla configurazione dei gambi delle note, delle legature di valore e dei punti negli accordi, nelle interruzioni di rigo e di pagina. Si può giudicare la bontà di queste decisioni confrontandole con incisioni effettivamente esistenti.

Miglioramento per analisi comparativa

Gli spartiti generati da LilyPond sono migliorati gradualmente nel tempo e continuano a migliorare grazie al confronto con quelli incisi a mano.

Per esempio, qui sotto si vede una riga di un brano di riferimento preso da un'edizione incisa (Bärenreiter BA320):

e qui la stessa citazione realizzata con una vecchissima versione di LilyPond (versione 1.4, maggio 2001):

La musica prodotta da LilyPond 1.4 è senza dubbio leggibile, ma un confronto serrato con lo spartito precedente ha mostrato numerosi errori nei dettagli di formattazione:

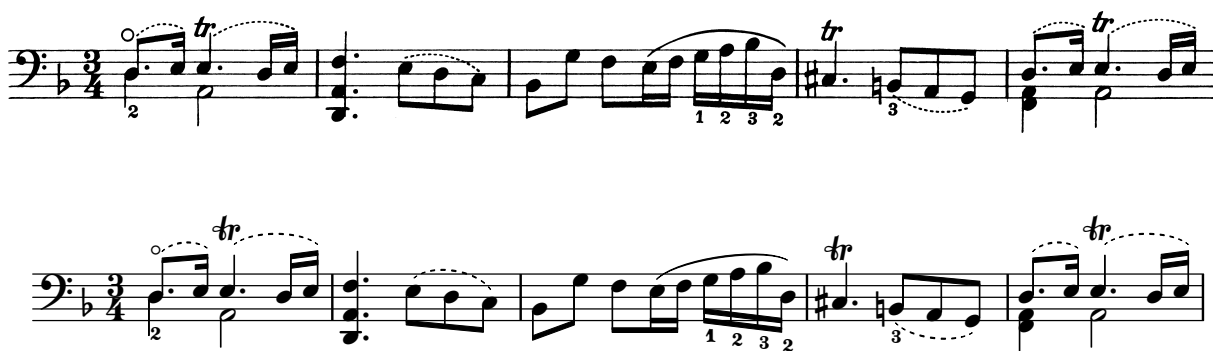

- c'è troppo spazio prima dell'indicazione di tempo
- i gambi delle note con travature sono troppo lunghi
- la seconda e la quarta misura sono troppo strette
- la legatura ha un aspetto imbarazzante

- le indicazioni di trillo sono troppo grandi
- i gambi sono troppo sottili

(Mancavano anche due teste di note, alcune indicazioni editoriali e c'era un'altezza errata!)

Aggiustando le regole di formattazione e il disegno del font, lo spartito è notevolmente migliorato. Confrontate lo stesso spartito di riferimento e quello prodotto con la versione corrente di LilyPond (2.24.0):

Non è certo un clone dell'edizione di riferimento, ma è comunque molto più vicino a una qualità editoriale rispetto alla versione precedente.

Mettere le cose a posto

Siamo in grado di misurare l'abilità di LilyPond nel prendere decisioni sull'incisione della musica anche confrontando il suo prodotto con quello di un software commerciale. In questo caso abbiamo scelto Finale 2008, uno dei programmi di notazione musicale a pagamento più diffusi, in particolare nel Nord America. Sibelius è il suo più acerrimo rivale e sembra andare particolarmente bene nel mercato europeo.

Per il nostro confronto, abbiamo selezionato la Fuga in sol minore dal Libro I del *Clavicembalo ben temperato* BWV 861 di Bach, il cui soggetto d'apertura è

Abbiamo inciso le ultime sette misure del brano (n. 28–34) con Finale e con LilyPond. In questo punto della composizione, il soggetto ritorna in uno stretto a tre parti e conduce alla sezione finale. Abbiamo resistito alla tentazione di apportare qualunque modifica al prodotto predefinito di Finale, perché stiamo cercando di mostrare che cosa ciascun software riesce a fare da solo, senza interventi umani. Le uniche modifiche di rilievo introdotte sono state aggiustare le dimensioni della pagina per adattarla a quelle di questo saggio e forzare la musica in due soli sistemi per rendere più agevole il confronto. Per impostazione predefinita, invece, Finale avrebbe inciso due sistemi di tre misure ciascuno e un terzo sistema contenente la sola misura finale larga tutta la riga.

Molte delle differenze tra le due versioni si concentrano nelle misure 28–29, come mostriamo qui di seguito (Finale sta sopra):

A scala microscopica, una sintassi simile si adopera facilmente. A una scala più larga, però, anche la sintassi ha bisogno di una struttura. In quale altro modo, altrimenti, sarebbe possibile scrivere brani complessi come sinfonie e opere liriche? La struttura è formata dal concetto di espressioni musicali: combinando minuscoli frammenti di musica in frammenti più consistenti, possiamo esprimere musica più complessa. Per esempio

f'4

Possiamo costruire note simultanee racchiudendole tra << e >>:

<<c4 d4 e4>>

Possiamo mettere in sequenza queste due espressioni racchiudendole tra parentesi graffe { ... }:

{ f4 <<c4 d4 e4>> }

Anche quella qui sopra è un'espressione, perciò può essere ulteriormente combinata con un'altra espressione simultanea (una minima, in questo caso): <<, \, e >>:

<< g2 \ { f4 <<c4 d4 e4>> } >>

Strutture ricorsive come quelle appena esaminate possono essere specificate in modo pulito e formale in una grammatica indipendente dal contesto, la quale genera anche il codice di analisi. In altre parole, la sintassi di LilyPond è definita in modo chiaro e privo di ambiguità

Interfacce utente e sintassi sono gli elementi immediatamente visibili agli utenti e quelli con cui essi hanno più a che fare. Un po' sono una questione di gusto, un po' l'argomento di molte discussioni: non troppo produttive, però, nonostante qualche pregio ce l'abbiano. Nel quadro più ampio di LilyPond, la sintassi di input non è molto importante: inventare una sintassi pulita è facile; molto più difficile, invece, è scrivere un codice di formattazione decente. Contiamo le righe di codice destinate ai due componenti e troveremo la conferma di quanto abbiamo appena affermato: analisi e rappresentazione occupano meno del 10% del codice sorgente.

Nel progettare le strutture usate in LilyPond, abbiamo preso decisioni diverse da quelle che appaiono in altri programmi. Considerate la natura gerarchica della notazione musicale:

programmabili: ciascun tipo di simbolo è gestito da un modulo a sé, un cosiddetto plug-in, completamente modulare e indipendente, così da poter essere sviluppato e migliorato separatamente. Tali plug-in sono chiamati *incisori* per analogia con l'artigiano che traduce le idee musicali in simboli grafici.

Nell'esempio seguente, cominciamo con il plug-in per le teste delle note, il `Note_heads_engraver`.

Poi il `Staff_symbol_engraver` aggiunge il rigo,

il `Clef_engraver` definisce un punto di riferimento per il rigo,

e lo `Stem_engraver` aggiunge i gambi.

Ogni volta che il programma incontra una testa di nota (o più d'una, se si tratta di un accordo) leggendo il file sorgente, avvisa lo `Stem_engraver`, il quale crea un gambo e glielo unisce. Aggiungendo gli incisori per travature, legature, accenti, accidenti, stanghette di battuta, indicazioni di tempo e armature di chiave, otteniamo la notazione completa.

Questo sistema funziona bene per la musica monofonica, ma che succede con la polifonia? Nella notazione polifonica, voci diverse possono condividere lo stesso rigo:

Nell'esempio qui sopra, armatura di chiave e rigo sono condivisi, ma gambi, legature, travature, eccetera, appartengono in modo esclusivo a ciascuna voce, perciò gli incisori devono essere raggruppati. Quelli per teste delle note, gambi, legature, eccetera, vanno in un gruppo chiamato 'contesto Voice', mentre quelli per chiave, accidenti, misure, eccetera, in un gruppo chiamato 'contesto Staff'. Nel caso della polifonia, un singolo contesto Staff contiene più di un contesto Voice. Analogamente, contesti Staff multipli possono essere messi in un singolo contesto Score. Il contesto Score rappresenta il contesto notazionale di livello massimo.

Internals Reference: Sezione “Contesti” in *Guida al Funzionamento Interno*.

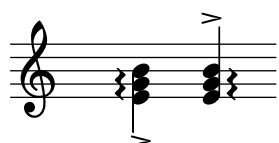

Architettura flessibile

Quando abbiamo cominciato, abbiamo scritto LilyPond interamente nel linguaggio di programmazione C++, scolpando nella pietra le sue funzionalità. Per una serie di ragioni, però, la cosa si è rivelata insoddisfacente.

- Quando LilyPond commette degli errori, gli utenti devono sovrascrivere le decisioni di formattazione, il che significa, in altre parole, che devono poter accedere al motore di formattazione. Quindi, regole e impostazioni non possono essere stabilite da noi durante la composizione, ma devono essere accessibili agli utenti durante l’esecuzione del programma.
- La bontà di un’incisione viene giudicata dagli occhi, e in ultima analisi è questione di gusto. Per quanto esperti noi siamo, gli utenti possono essere in disaccordo con le nostre decisioni personali, perciò devono poter accedere anche alle definizioni dello stile tipografico.
- Infine, gli algoritmi di formattazione vengono rifiniti incessantemente da noi, il che ci richiede di dover contare su un approccio alle regole flessibile, e il modo con cui C++ impone di raggrupparle non può essere applicato facilmente alla formattazione della notazione musicale.

Abbiamo affrontato questi problemi integrando in LilyPond un interprete del linguaggio di programmazione Scheme e riscrivendoci parti del programma. Ora l’architettura di formattazione è costruita intorno alla nozione di oggetti grafici, descritti dalle variabili e dalle funzioni di Scheme, e comprende regole di formattazione, stile tipografico e decisioni di formattazione individuali. L’utente può accedere direttamente alla maggior parte di questi controlli.

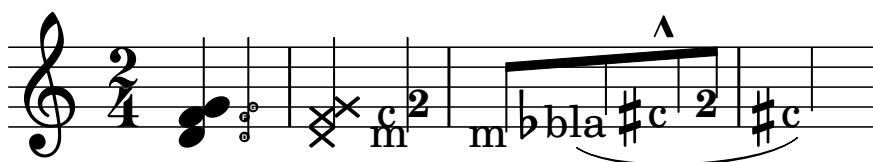

Le variabili di Scheme controllano le decisioni in merito all’aspetto della pagina. Per esempio, molti oggetti grafici possiedono una variabile di direzione che codifica la scelta tra su e giù (o tra destra e sinistra). Qui sotto vedete due accordi con accenti e arpeggi. Nel primo, tutti gli oggetti grafici hanno direzione giù (o sinistra), nel secondo, hanno direzione su (destra).

Il processo di formattazione di uno spartito consiste nel leggere e scrivere le variabili degli oggetti grafici, alcune delle quali hanno un valore predefinito. Per esempio, lo spessore di molte linee – una caratteristica dello stile tipografico – è una di queste. Siete liberi di modificare questo valore, donando al vostro spartito un’impressione tipografica diversa.

Anche le regole di formattazione sono variabili preimpostate: ogni oggetto possiede variabili contenenti procedure. Sono queste ultime a eseguire la formattazione vera e propria, e sostituendone di diverse, possiamo modificare l'aspetto degli oggetti. Nell'esempio seguente, la regola che governa quali oggetti sono adoperati per produrre il simbolo della testa di nota è cambiata nel corso del frammento.

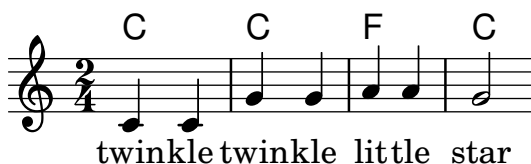

1.5 Mettere LilyPond al lavoro

Abbiamo scritto LilyPond per sperimentare come sia possibile condensare l'arte dell'incisione musicale in un programma per computer. Grazie a tutto questo duro lavoro, ora il programma può essere adoperato per eseguire compiti utili. La sua applicazione più semplice è la stampa delle note.

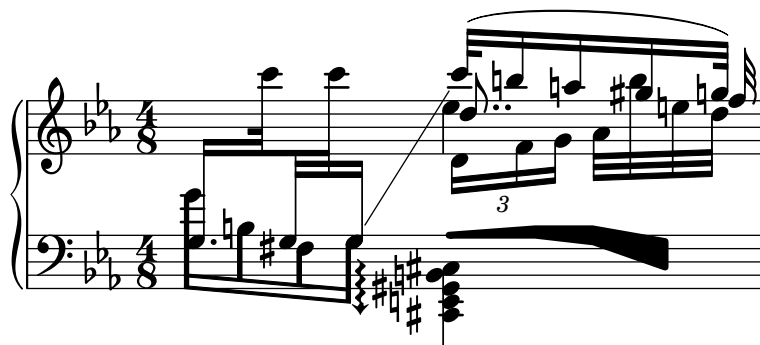

Aggiungendo i nomi degli accordi e le parole, otteniamo una notazione da canzoniere.

Possiamo stampare anche notazione polifonica e musica per pianoforte. L'esempio seguente combina alcune costruzioni più esotiche.

Screech and boink Random complex notation

Han-Wen Nienhuys

Tutti i frammenti mostrati sopra sono stati scritti a mano, ma ciò non è indispensabile. Dato che il motore di formattazione è in gran parte automatico, può servire per generare output per altri programmi che gestiscono musica. Per esempio, può essere adoperato anche per convertire database di frammenti musicali in immagini da utilizzare in siti Web e presentazioni multimediali.

Anche questo documento ne mostra un'applicazione: il formato di input è testuale, perciò può essere facilmente integrato in altri formati basati sul testo come \LaTeX , HTML o, nel caso di questo manuale, Texinfo. Mediante il programma `lilypond-book`, compreso in LilyPond, nei file di output PDF o HTML risultanti i frammenti di input possono essere sostituiti dalle corrispondenti immagini a contenuto musicale. Un altro esempio è l'estensione di terze parti `OOoLilyPond` per OpenOffice.org o LibreOffice, che rende estremamente semplice includere frammenti musicali nei documenti.

Per ulteriori esempi di LilyPond all'opera, per la documentazione completa e per il programma in sé, visitate il nostro sito Internet ufficiale: www.lilypond.org.

1.6 Esempi di incisione (BWV 861)

Questa sezione contiene quattro incisioni di riferimento e due versioni generate al computer delle ultime sette misure della Fuga in Sol minore dal *Clavicembalo ben temperato*, Libro I, BWV 861, di J.S. Bach.

Bärenreiter BA5070 (Neue Ausgabe Sämtlicher Werke, Serie V, Band 6.1, 1989):

Bärenreiter BA5070 (Neue Ausgabe Sämtlicher Werke, Serie V, Band 6.1, 1989), fonte musicale alternativa. Differenze testuali a parte, questo esempio mostra leggere variazioni d'incisione anche nella stessa edizione della medesima casa editrice:

The image shows a musical score for measures 28-31 of the Fugue in G minor, BWV 861, from the Breitkopf & Härtel edition. The score is written for piano and consists of two staves. Measure 28 starts with a treble clef and a key signature of one flat (F major/D minor). The melody in the treble staff begins with a quarter note G4, followed by a quarter rest, then an eighth note A4, and continues with a series of eighth and sixteenth notes. The bass staff has a whole note G3. Measure 29 continues the melody in the treble staff with a quarter note Bb4, a quarter rest, and then a series of eighth and sixteenth notes. The bass staff has a whole note A2. Measure 30 shows the melody in the treble staff with a quarter note C5, a quarter rest, and then a series of eighth and sixteenth notes. The bass staff has a whole note Bb2. Measure 31 ends with a double bar line. The score includes various musical notations such as clefs, key signature, time signature, and various note values and rests.

Breitkopf & Härtel, edited by Ferruccio Busoni (Wiesbaden, 1894), disponibile anche nella Petrucci Music Library (IMSLP #22081). Le indicazioni editoriali (diteggiature, articolazioni, eccetera) qui sono state rimosse per permettere un confronto più agevole con le altre edizioni:

Bach-Gesellschaft edition (Leipzig, 1866), disponibile nella Petrucci Music Library (IMSLP #02221):

Finale 2008:

Two systems of musical notation for piano. The first system contains measures 28, 29, and 30. The second system contains measures 31, 32, 33, and 34. The music is in 3/4 time, key of B-flat major (two flats). Measure 28 features a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 29 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 30 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 31 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 32 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 33 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 34 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass.

LilyPond, versione 2.24.0:

Two systems of musical notation for piano, identical to the first system. The first system contains measures 28, 29, and 30. The second system contains measures 31, 32, 33, and 34. The music is in 3/4 time, key of B-flat major (two flats). Measure 28 features a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 29 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 30 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 31 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 32 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 33 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass. Measure 34 has a treble clef with a half note G4, a quarter note A4, and a quarter note B4, with a whole note F4 in the bass.

2 Bibliografia

Di seguito elenchiamo i riferimenti usati per LilyPond.

2.1 Bibliografia breve

Se avete bisogno di saperne di più sulla notazione musicale, qui ci sono alcuni titoli interessanti da leggere.

Ignatzek 1995

Klaus Ignatzek, Die Jazzmethode für Klavier. Schott's Söhne 1995. Mainz, Germany ISBN 3-7957-5140-3.

Guida introduttiva alla pratica del jazz sul pianoforte. Uno dei primi capitoli contiene una panoramica sugli accordi adoperati comunemente nel jazz.

Gerou 1996

Tom Gerou and Linda Lusk, Essential Dictionary of Music Notation. Alfred Publishing, Van Nuys CA ISBN 0-88284-768-6.

Un elenco conciso e in ordine alfabetico delle questioni riguardanti la tipografia e la notazione musicale, comprendente la maggior parte dei casi più comuni.

Gould 2011

Elaine Gould, Behind Bars: the Definitive Guide to Music Notation. Faber Music Ltd. ISBN 0-571-51456-1.

Hals über Kopf: Das Handbuch des Notensatzes. Edition Peters. ISBN 1843670488.

Una guida completa a regole e convenzioni della notazione musicale. Copre tutti gli argomenti dalle nozioni fondamentali alle tecniche più complesse e fornisce una preparazione completa sui principi della notazione.

Read 1968

Gardner Read, Music Notation: A Manual of Modern Practice. Taplinger Publishing, New York (2nd edition).

Un'opera fondamentale sulla notazione musicale.

Ross 1987 Ted Ross, Teach yourself the art of music engraving and processing. Hansen House, Miami, Florida 1987.

Questo libro parla di incisione musicale, cioè di tipocomposizione professionale. Contiene indicazioni sulla punzonatura, sull'uso degli strumenti di scrittura e sulle convenzioni notazionali. Interessanti anche le sezioni storiche e sulle tecniche di riproduzione.

Schirmer 2001

The G.Schirmer/AMP Manual of Style and Usage. G.Schirmer/AMP, NY, 2001. (Si può ordinare questo libro anche a noleggio.)

Questo manuale si concentra in particolare sulla preparazione della stampa per le edizioni Schirmer. Discute molti dettagli di solito non presenti negli altri libri sulla notazione musicale. Dà anche una buona idea di ciò che serve per conferire alle stampe una qualità editoriale.

Stone 1980

Kurt Stone, Music Notation in the Twentieth Century. Norton, New York 1980.

Questo libro descrive la notazione musicale per la musica seria contemporanea, ma comincia con una panoramica completa delle pratiche notazionali tradizionali esistenti.

- David A. Gomberg. **A Computer-oriented System for Music Printing**. *Computing and the Humanities*, 11:63–80, march 1977. Gourlay [gourlay86] writes: "A discussion of the problems of representing the conventions of musical notation in computer algorithms."
- John. S. Gourlay. **A language for music printing**. *Communications of the ACM*, 29(5):388–401, 1986. This paper describes the MusiCopy musicsetting system and an input language to go with it.
- John S. Gourlay, A. Parrish, D. Roush, F. Sola, and Y. Tien. **Computer Formatting of Music**. Technical Report OSU-CISRC-2/87-TR3, Department of Computer and Information Science, The Ohio State University, 1987. This paper discusses the development of algorithms for the formatting of musical scores (from abstract). It also appeared at PROTEXT III, Ireland 1986.
- John S. Gourlay. **Spacing a Line of Music**. Technical Report OSU-CISRC-10/87-TR35, Department of Computer and Information Science, The Ohio State University, 1987.
- John Grøver. **A computer-oriented description of Music Notation. Part III: Accidental Positioning**. Technical Report 135, Department of informatics, University of Oslo, 1989. Placement of accidentals crystallised in an enormous set of rules. Same remarks as for [grover89-twovoices] applies.
- John Grøver. **A computer-oriented description of Music Notation. Part I. The Symbol Inventory**. Technical Report 133, Department of informatics, University of Oslo, 1989. The

goal of this series of reports is a full description of music formatting. As these largely depend on parameters of fonts, it starts with a verbose description of music symbols. The subject is treated backwards: from general rules of typesetting the author tries to extract dimensions for characters, whereas the rules of typesetting (in a particular font) follow from the dimensions of the symbols. His symbols do not match (the stringent) constraints formulated by eg. [wanske].

- John Grøver. **A computer-oriented description of Music Notation. Part II: Two Voice Sharing a Staff, Leger Line Rules, Dot Positioning.** Technical Report 134, Department of informatics, University of Oslo, 1989. A lot rules for what is in the title are formulated. The descriptions are long and verbose. The verbosity shows that formulating specific rules is not the proper way to approach the problem. Instead, the formulated rules should follow from more general rules, similar to [parrish87-simultaneities].
- Lippold Haken and Dorothea Blostein. **The Tilia Music Representation: Extensibility, Abstraction, and Notation Contexts for the Lime Music Editor.** *Computer Music Journal*, 17(3):43–58, 1993.
- Lippold Haken and Dorothea Blostein. **A New Algorithm for Horizontal Spacing of Printed Music.** Banff, In *International Computer Music Conference*, pages 118-119, Sept 1995. This describes an algorithm which uses springs between adjacent columns.
- Wael A. Hegazy. **On the Implementation of the MusiCopy Language Processor.** Technical Report OSU-CISRC-10/87-TR34, Department of Computer and Information Science, The Ohio State University, 1987. Describes the "parser" which converts MusiCopy MDL to MusiCopy Simultaneities and columns. MDL is short for Music Description Language [gourlay86]. It accepts music descriptions that are organised into measures filled with voices, which are filled with notes. The measures can be arranged simultaneously or sequentially. To address the 2-dimensionality, almost all constructs in MDL must be labeled. MDL uses begin/end markers for attribute values and spanners. Rightfully the author concludes that MusiCopy must administrate a "state" variable containing both properties and current spanning symbols. MusiCopy attaches graphic information to the objects constructed in the input: the elements of the input are partially complete graphic objects.
- Wael A. Hegazy and John S. Gourlay. **Optimal line breaking in music.** Technical Report OSU-CISRC-8/87-TR33, Department of Computer and Information Science, The Ohio State University,, 1987.
- Wael A. Hegazy and John S. Gourlay. (J. C. van Vliet, editor). **Optimal line breaking in music.** Cambridge University Press, In *Proceedings of the International Conference on Electronic Publishing, Document Manipulation and Typography. Nice (France)*, April 1988.

- Howard Wright. **how to read and write tab: a guide to tab notation**. . FAQ (with answers) about TAB, the ASCII variant of Tablature. HWN.
- Geraint Wiggins, Eduardo Miranda, Alaaaan Smaill, and Mitch Harris. **A Framework for the evaluation of music representation systems**. *Computer Music Journal*, 17(3), 1993. A categorisation of music representation systems (languages, OO systems etc) split into high level and low level expressiveness. The discussion of Charm and parallel processing for music representation is rather vague. HWN.

Engraving bibliography

- Harald Banter. **Akkord Lexikon**. Schott's Söhne, Mainz, Germany, 1987. Comprehensive overview of commonly used chords. Suggests (and uses) a unification for all different kinds of chord names.
- A Barksdale. **The Printed Note: 500 Years of Music Printing and Engraving**. The Toledo Museum of Art, Toledo, Ohio, January 1957. 'The exhibition "The Printed Note" attempts to show the various processes used since the second of the 15th century for reproducing music mechanically ... '. The illustration mostly feature ancient music.
- Laszlo Boehm. **Modern Music Notation**. G. Schirmer, Inc., New York, 1961. Heussenstamm writes: A handy compact reference book in basic notation.
- H. Elliot Button. **System in Musical Notation**. Novello and co., London, 1920.
- Herbert Chlapik. **Die Praxis des Notengraphikers**. Doblinger, 1987. An clearly written book for the casually interested reader. It shows some of the conventions and difficulties in printing music HWN.
- Anthony Donato. **Preparing Music Manuscript**. Prentice-Hall, Englewood Cliffs, NJ, 1963.
- Donemus. **Uitgeven van muziek**. Donemus Amsterdam, 1982. Manual on copying for composers and copyists at the Dutch publishing house Donemus. Besides general comments on copying, it also contains a lot of hands-on advice for making performance material for modern pieces.
- William Gamble. **Music Engraving and printing. Historical and Technical Treatise**. Sir Isaac Pitman & Sons, ltd., 1923. This patriotic book was an attempt to promote and help British music engravers. It is somewhat similar to Hader's book [hader48] in scope and style, but Gamble focuses more on technical details (Which French punch cutters are worth buying from, etc.), and does not treat typographical details, such as optical illusions. It is available as reprint from Da Capo Press, New York (1971).
- Tom Gerou and Linda Lusk. **Essential Dictionary of Music Notation**. Alfred Publishing, Van Nuys CA, 1996. A cheap, concise, alphabetically ordered list of typesetting and music (notation) issues with a rather simplistic attitude but in most cases "good-enough" answers JCN.
- Elaine Gould. **Behind Bars**. Faber Music Ltd., 2011. A comprehensive guide to the rules and conventions of music notation. Covering everything from basic themes to complex techniques and providing a comprehensive grounding in notational principles.
- Elaine Gould. **Hals über Kopf**. Edition Peters, 2014. Ein vollständiges Regelwerk für den Modernen Notensatz auf höchstem Niveau, ein Meilenstein der Notationskunde und ein Leitfaden für jeden Musiker, der sich auf diesem Gebiet umfassende Kenntnisse aneignen möchte.

- Karl Hader. **Aus der Werkstatt eines Notenstechers**. Waldheim–Eberle Verlag, Vienna, 1948. Hader was a chief-engraver in a Viennese engraving workshop. This beautiful booklet was intended as an introduction for laymen on the art of engraving. It contains a step by step, in-depth explanation of how to cut and stamp music into zinc plates. It also contains a few compactly formulated rules on musical orthography. Out of print.
- George Heussenstamm. **The Norton Manual of Music Notation**. Norton, New York, 1987. Hands-on instruction book for copying (ie. handwriting) music. Fairly complete. HWN.
- Klaus Ignatzek. **Die Jazzmethode für Klavier 1**. Schott, 1995. This book contains a system for denoting chords that is used in LilyPond.
- Andreas Jaschinski, editor. **Notation**. Number BVK1625. Bärenreiter Verlag, 2000.
- Harold Johnson. **How to write music manuscript**. Carl Fischer, Inc., New York, 1946.
- Erdhard Karkoshka. **Notation in New Music; a critical guide to interpretation and realisation**. Praeger Publishers, New York, 1972. (Out of print).
- Mark Mc Grain. **Music notation**. Hal Leonard Publishing Corporation, 1991. HWN writes: ‘Book’ edition of lecture notes from XXX school of music. The book looks like it is xeroxed from bad printouts. The content has nothing you won’t find in other books like [read] or [heussenstamm].
- mpa. **Standard music notation specifications for computer programming..** MPA, December 1996. Pamphlet explaining a few fine points in music font design HWN.
- Richard Rastall. **The Notation of Western Music: an Introduction**. J. M. Dent & Sons London, 1983. Interesting account of the evolution and origin of common notation starting from neumes, and ending with modern innovations HWN.
- Gardner Read. **Modern Rhythmic Notation**. Indiana University Press, 1978. Sound (boring) review of the various hairy rhythmic notations used by avant-garde composers HWN.
- Gardner Read. **Music Notation: a Manual of Modern Practice**. Taplinger Publishing, New York, 1979. This is as close to the “standard” reference work for music notation issues as one is likely to get.
- Clinton Roemer. **The Art of Music Copying**. Roerick music co., Sherman Oaks (CA), 2nd edition, 1984. Out of print. Heussenstamm writes: an instructional manual which specializes in methods used in the commercial field.
- Glen Rosecrans. **Music Notation Primer**. Passantino, New York, 1979. Heussenstamm writes: Limited in scope, similar to [Roemer84].
- Carl A Rosenthal. **A Practical Guide to Music Notation**. MCA Music, New York, 1967. Heussenstamm writes: Informative in terms of traditional notation. Does not concern score preparation.
- Ted Ross. **Teach yourself the art of music engraving and processing**. Hansen House, Miami, Florida, 1987.
- Schirmer. **The G. Schirmer Manual of Style and Usage**. The G. Schirmer Publications Department, New York, 2001. This is the style guide for Schirmer publications. This manual specifically focuses on preparing print for publication by Schirmer. It discusses many details that are not in other, normal notation books. It also gives a good idea of what is necessary to bring printouts to publication quality. It can be ordered from the rental department.
- Kurt Stone. **Music Notation in the Twentieth Century**. Norton, New York, 1980. Heussenstamm writes: The most important book on notation in recent years.
- Börje Tyboni. **Noter Handbok I Traditionell Notering**. Gehrman's Musikförlag, Stockholm, 1994. Swedish book on music notation.

- Maxwell Weaner and Walter Boelke. **Standard Music Notation Practice**. Music Publisher's Association of the United States Inc, New York, 1993.
- Johannes Wolf. **Handbuch der Notationskunde**. Breitkopf & Hartel, Leipzig, 1919. Very thorough treatment (in two volumes) of the history of music notation.

Appendice A GNU Free Documentation License

Version 1.3, 3 November 2008

Copyright © 2000, 2001, 2002, 2007, 2008 Free Software Foundation, Inc.
<https://fsf.org/>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other functional and useful document *free* in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of “copyleft”, which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The “Document”, below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as “you”. You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A “Modified Version” of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A “Secondary Section” is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document’s overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The “Invariant Sections” are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The “Cover Texts” are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A “Transparent” copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not “Transparent” is called “Opaque”.

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The “Title Page” means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, “Title Page” means the text near the most prominent appearance of the work’s title, preceding the beginning of the body of the text.

The “publisher” means any person or entity that distributes copies of the Document to the public.

A section “Entitled XYZ” means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as “Acknowledgements”, “Dedications”, “Endorsements”, or “History”.) To “Preserve the Title” of such a section when you modify the Document means that it remains a section “Entitled XYZ” according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document’s license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both

covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.
- B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.
- C. State on the Title page the name of the publisher of the Modified Version, as the publisher.
- D. Preserve all the copyright notices of the Document.
- E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
- F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
- G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
- H. Include an unaltered copy of this License.
- I. Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its

Title Page, then add an item describing the Modified Version as stated in the previous sentence.

- J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the “History” section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
- K. For any section Entitled “Acknowledgements” or “Dedications”, Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
- L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.
- M. Delete any section Entitled “Endorsements”. Such a section may not be included in the Modified Version.
- N. Do not retitle any existing section to be Entitled “Endorsements” or to conflict in title with any Invariant Section.
- O. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version’s license notice. These titles must be distinct from any other section titles.

You may add a section Entitled “Endorsements”, provided it contains nothing but endorsements of your Modified Version by various parties—for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled “History” in the various original documents, forming one section Entitled “History”; likewise combine any sections Entitled “Acknowledgements”, and any sections Entitled “Dedications”. You must delete all sections Entitled “Endorsements.”

6. COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

7. AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an “aggregate” if the copyright resulting from the compilation is not used to limit the legal rights of the compilation’s users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document’s Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

8. TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled “Acknowledgements”, “Dedications”, or “History”, the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, or distribute it is void, and will automatically terminate your rights under this License.

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, receipt of a copy of some or all of the same material does not give you any rights to use it.

10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <https://www.gnu.org/licenses/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License “or any later version” applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation. If the Document specifies that a proxy can decide which future versions of this License can be used, that proxy’s public statement of acceptance of a version permanently authorizes you to choose that version for the Document.

11. RELICENSING

“Massive Multiauthor Collaboration Site” (or “MMC Site”) means any World Wide Web server that publishes copyrightable works and also provides prominent facilities for anybody to edit those works. A public wiki that anybody can edit is an example of such a server. A “Massive Multiauthor Collaboration” (or “MMC”) contained in the site means any set of copyrightable works thus published on the MMC site.

“CC-BY-SA” means the Creative Commons Attribution-Share Alike 3.0 license published by Creative Commons Corporation, a not-for-profit corporation with a principal place of business in San Francisco, California, as well as future copyleft versions of that license published by that same organization.

“Incorporate” means to publish or republish a Document, in whole or in part, as part of another Document.

An MMC is “eligible for relicensing” if it is licensed under this License, and if all works that were first published under this License somewhere other than this MMC, and subsequently incorporated in whole or in part into the MMC, (1) had no cover texts or invariant sections, and (2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site under CC-BY-SA on the same site at any time before August 1, 2009, provided the MMC is eligible for relicensing.

ADDENDUM: How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

```
Copyright (C)  year  your name.
Permission is granted to copy, distribute and/or modify this document
under the terms of the GNU Free Documentation License, Version 1.3
or any later version published by the Free Software Foundation;
with no Invariant Sections, no Front-Cover Texts, and no Back-Cover
Texts.  A copy of the license is included in the section entitled ``GNU
Free Documentation License''.
```

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the “with...Texts.” line with this:

```
with the Invariant Sections being list their titles, with
the Front-Cover Texts being list, and with the Back-Cover Texts
being list.
```

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
